Weight: 160lbs (73kg)

More than ever, consumers are choosing to purchase their bulk bottled water at retail locations.

Store owners are quickly realizing that offering bulk pure water to their clients is a very profitable venture.

Progressive retailers are choosing to purify their own water in-house and encouraging people to fill their own container through a self serve water dispenser located in their store.

Precision Design is one of Canada's most experienced water companies and was the first to introduce self serve water dispensers to the retail sector over a decade ago. We continue to help evolve the self serve water business by improving and adding features to our stainless steel water dispensers.

Capture a portion of the bottled water delivery market by offering bulk water through a Precision engineered and designed self serve water dispenser.

Our Double Manual Dispenser fits nicely into a high traffic store. With two fill stations available, consumers rarely wait to fill up their container with fresh purified water. Consumers can easily fill up a 5 gallon of container of water by pushing and holding the fill button for approximately 60 seconds.

Include a fresh no-spill cap with every new fill and allow consumers to fill a variety of sizes, shapes and designs of bottles at your dispenser.

A Precision dispenser is filled with quick and easy maintenance features that will help your dispenser look clean and hygienic every day!

All specifications are subject to change without notice.
